

Common Causes of Acne

1. **Oil** naturally produced by the body. Hormone changes increase oil.
2. **Clogged Pores** are caused by skin not shedding quickly enough.
3. **Bacteria** called Propionibacterium acnes or P. acnes bacteria causes acne breakouts; it resides in the hair follicles and feeds on the over produced oil.

Why is pH important?

The acid mantle is a very fine, slightly acidic layer on the skin's surface acting as a barrier to bacteria. When this film is stripped away by harsh cleansers or drying products, you no longer have this protection. The acid mantle takes 24 hours to fully regenerate once stripped, so using a harsh product even once a day could prevent the acid mantle from reforming.

What is SkinTech Acne Solution?

SkinTech Acne Solution is a precise combination of Vitamin C derivatives blended into an acidic serum.

Vitamin C is associated with several beneficial properties, including the promotion of collagen synthesis, photo-protection from UVA and UVB, lightening of hyperpigmentation, and improvement of a variety of inflammatory conditions.

We utilize both 5% Magnesium Ascorbyl Phosphate (MAP) and 5% Sodium Ascorbyl Phosphate (SAP). MAP is an effective antioxidant showing improvement for inflammatory acne. SAP has been clinically shown to inactivate P. acnes bacteria. Independent studies have shown it to be more efficacious than 5% benzoyl peroxide 0.1% Adapalene or 1% Clindamycin.

The SkinTech Acne Solution has a low pH level that maintains your skins' acid mantle, improving skin appearance without stripping, irritating or drying the skin.

Instructions for Use 1 to 2 Times Daily

1. *Cleanse your skin with a gentle cleanser.*
2. *Pat your skin dry with a towel.*
3. *Apply the SkinTech Acne Solution to your skin with a pad or cotton swab.*
4. *Allow your skin to dry before applying any other skin care products.*

For optimal results combine with a professional pore cleansing or extraction facial.
